Additional Info

🇮🇷 Military Service Status: Exempted

Availability: Seeking Internships / Junior

🔗 Positions in AI/ML, Data Science, or Backend
Software Engineering and Data driven position

📜 Certifications: Completed multiple independent
courses and active competitor on Kaggle.

Projects

AI Hand Gesture Recognition

2026

- Utilized spatial coordinates instead of raw pixel images to significantly lower image processing overhead
- Designed the architecture to achieve optimized execution speeds and lower CPU strain.

<https://github.com/KLorK-Tec/MediaAi>

Financial Risk Assessment AI Model

2026

- Built a machine learning classification model to determine credit and loan default risks (risky vs. not risky).
- Conducted end-to-end data processing, predictive analytics, and statistical reporting.
- Compiled all visualizations and analytics documentation into a comprehensive Jupyter Notebook.

<https://github.com/KLorK-Tec/FinanceRiskAi>

Java Bank CLI Application

2026

- Programmed a structured Command Line Interface (CLI) banking application in Java.
- Integrated database connection handlers securely using MongoDB for persistent storage.
- Implemented backend logistics supporting transactional security and fund transfer capabilities.

<https://hamgit.ir/kalhork/bankcli>

C# CRUD Mixed Database Practice

2025

- Created a series of backend CRUD projects utilizing the C# language.
- Practiced structural integration between system business logic and mixed SQL/NoSQL architectures.

Summary

I am a Computer Science student at Islamic Azad University (Central Tehran Branch) with a strong passion for programming, Artificial Intelligence, Machine Learning, and database architecture. I thrive on solving complex algorithmic problems and building optimized, data-driven software solutions.
